Professional Summary

Dynamic AI/GenAI Engineer with 5 years of software development and AI experience, specializing in architecting and deploying end-to-end AI solutions. Proven track record of scaling GenAI products from POC to production, building advanced RAG pipelines, and deploying containerized microservices. Adept at leveraging vector databases, distributed messaging (Kafka), and orchestration tools (Kubernetes, Airflow) to deliver high-availability, low-latency enterprise applications.

Technical Skills

Programming & Frameworks: Python, Flask, FastAPI, Streamlit, Gradio

AI/GenAI: RAG Pipelines, LLM Integration, Prompt Engineering, Model Fine-Tuning, PyTorch, LangChain

Vector Search & Retrieval: FAISS, Milvus, ChromaDB, Elasticsearch

Data Engineering: Apache Kafka, Apache Airflow, Pandas, NumPy

Backend & Integrations: Microservices Architecture, Async Python, REST APIs, Jira / ServiceNow Integrations

Cloud & DevOps: Docker, Kubernetes, AWS, GCP, Microsoft Azure, IBM Cloud, GitHub Actions

Databases: MongoDB, MySQL

Professional Experience

Infobell IT Solutions

Software Engineer - AI

March 2024 – Present

Bengaluru, India

- Incident Resolution Assistant:** Architected a Python-based microservices platform integrating with ServiceNow to assist SREs. Scaled the application from a 20-user POC to a production tool supporting 200+ SREs, processing live incident streams.
- Performance Optimization:** Engineered an event-driven Kafka and Elasticsearch pipeline for real-time log fetching, achieving 90% accuracy in automated root cause identification and reducing MTTR by 40–60%.
- Advanced Retrieval:** Designed a hybrid retrieval system to overcome data ambiguity, boosting similar-incident recall from 30% to over 80%. Orchestrated full-stack deployment on Kubernetes using custom Helm charts.
- Cloud-Native Anomaly Detection:** Built and deployed an automated anomaly detection system utilizing Apache Airflow pipelines to process vast, data-center-scale datasets on a Kubernetes cluster.
- Convogene.ai (RAG Chatbot):** Architected a customized RAG chatbot with live internet access for dynamic data enrichment. Achieved a 50% improvement in response quality and near-zero hallucination, validated through rigorous ground-truth manual testing, before deploying on Microsoft Azure.
- Multimodal AI Generation:** Owned the end-to-end lifecycle for the EROS NOW generative AI solution, successfully fine-tuning an instruct-pix2pix model and managing the final application rollout.

India STEM Foundation

Master Trainer - AI & Python

August 2022 – August 2023

Remote & On-site, India

- Led comprehensive online training programs in Python programming and Artificial Intelligence for a diverse, international student base across the USA, UK, Singapore, and India.
- Designed and delivered hands-on hardware and software integration curriculums in schools, focusing on robotics utilizing Python, C, Raspberry Pi, and Arduino.
- Mentored students in building end-to-end technical projects, translating complex software concepts into accessible, actionable learning modules.

Koderoom

Junior Software Developer

June 2020 – June 2022

Remote, India

- Developed core backend features for a legal contract management platform designed to structure, store, and manage complex documents for legal cases.
- Built and maintained backend APIs to support document parsing, data structuring, and secure retrieval of sensitive legal contracts.
- Collaborated with cross-functional teams to streamline platform performance and ensure reliable document processing workflows.

Education

Centre for Development of Advanced Computing (C-DAC)	September 2023 – February 2024
Post Graduate Training Program (6 Months)	
G H Raisonni Academy of Engineering and Technology	2015 – February 2018
Bachelor of Engineering (B.E.), Mechanical Engineering	Nagpur, India
G H Raisonni Polytechnic	2012 – 2015
Diploma in Mechanical Engineering	Nagpur, India

Certifications & Publications

- Certification:** IBM Cloud Advocate Essentials (Issued December 2025)
- Publication:** Research paper detailing the design and mechanics of a Hexapod Robot, published in IEEE (2019)
